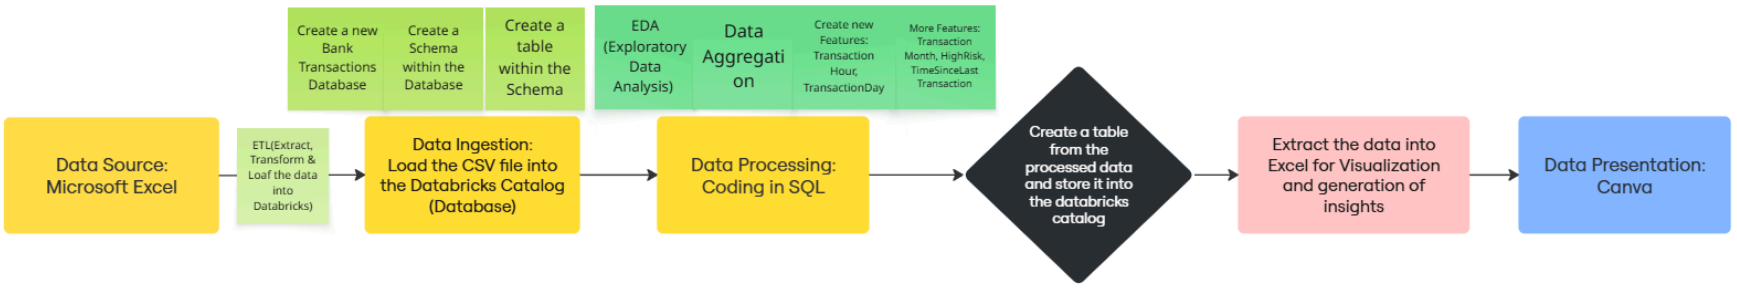
Which Transaction Types (Debit/ Credit) generate the highest total value?
Transactions By Day (Extract the days with the highest transactions)
Which Channels (ATM, Web, Mobile) are mostly used?
Which Age groups are most active?
Transactions with high Login attempts
What is the average Transaction Amount?
Extract a specific hour with the highest transactions
Transactions By Channel
Which customers maintain the highest Account Balances?
Sudden Location Changes
Total Transaction Value
Find which city makes the most Transactions
How does transaction activity change over time?
Extract a month with the highest Transactions
Average value per channel
Transactions By occupation (Which occupation makes the most transactions)
Transactions By Age Group (Which age group makes the most transactions)
High value + Short duration transactions
Digital Banking Transaction Analysis
miro



Create a new Bank Transactions Database
Create a Schema within the Database
Create a table within the Schema
EDA (Exploratory Data Analysis)
Data Aggregation
Create new Features: Transaction Hour, TransactionDay
More Features: Transaction Month, HighRisk, TimeSinceLast Transaction
Data Source: Microsoft Excel
ETL(Extract, Transform & Loaf the data into Databricks)
Data Ingestion: Load the CSV file into the Databricks Catalog (Database)
Data Processing: Coding in SQL
Create a table from the processed data and store it into the databricks catalog
Extract the data into Excel for Visualization and generation of insights
Data Presentation: Canva
